Adobe Illustrator	from version CS6 to CC2019	from CS6 to the latest 2024	from CS6 to the lastest 2024		from CS6 to the lastest Illustrator 2025		from CC2015 to the Illustrator 2025, version 29.7.1	

Important Note!
Support for version 6 and 7 has been discontinued.

Please note that the last tested version of the EngView plug-in for Adobe Illustrator is 29.7.1. Each time a new release of Adobe Illustrator becomes available, our team immediately begins testing the integration. If any issues are identified, resolving them becomes a top priority. However, some customers may upgrade before we have completed testing and applied fixes. For this reason, we recommend always checking which is the latest tested version of Adobe Illustrator before updating.

If you have already upgraded to Illustrator 29.8, please be aware of a known issue: when saving an .ai file, all structural design information is lost and 3D visualization is unavailable. Until a fix is released, we recommend saving your files as PDF or EPS after making changes in Illustrator. When these files are reopened in Illustrator, the 3D functionality will continue to work properly.
